AVAZIA

Long-Lasting Relief of Chronic and Post-operative Pain

➤ **BEST-RSI[®] and PRO-SPORT ULTRA[®]**

Avazzia's prescription-level pain relief devices incorporate proprietary Bio-Electric Stimulation Technology (B.E.S.T.[®]) for the relief of chronic, intractable, post-traumatic and post-operative pain associated with medically-diagnosed conditions. The smart microcurrent devices safely and effectively stimulate the body's natural response to pain, without drugs, injections or surgery – providing relief up to 12 hours.

Proprietary Reaction Technology

Each person's body is different. Our interactive waveform changes in response to the patient's particular tissue changes.

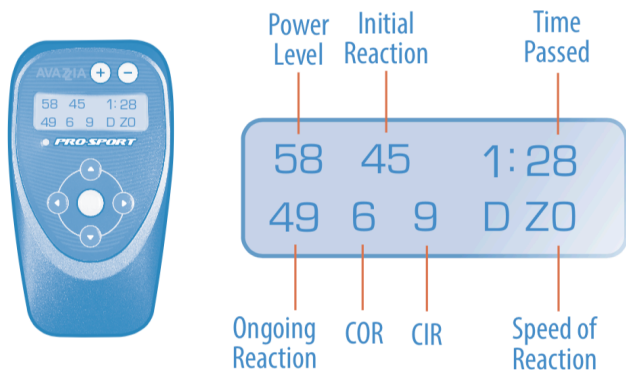

Reduce or Eliminate Pain Medications

Managing chronic and acute pain is a time-consuming process for patients and their healthcare providers. Consistent use of Avazzia's microcurrent technology is shown to reduce, or in some cases, eliminate the need for pain medications. In addition, patients with reduced pain require fewer office visits to address this concern.

Collaborating with Tier 1 VHA Research Affiliates

Baylor College of Medicine, UT Southwestern Medical Center and Stanford University School of Medicine are currently evaluating new uses of Avazzia's bio-electric device (study device is FDA-cleared for pain relief).

Real-Time Data of Therapy Progress

➤ Promoting Patient Compliance

Avazzia's reaction technology measures and displays data related to tissue impedance, conductivity and rate of reaction. This unique process reduces accommodation and facilitates the display of real-time, actionable data. This data assists physicians in understanding their patient's progress and encourages compliance with their treatment plan.

Dr. Brian Lepow Baylor College of Medicine

"Effective clinically with a user-friendly design making at-home application simplistic for our patients thus increasing compliance."
